DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1,2,5 are rejected under 35 U.S.C. 102(b) as being anticipated by Imagawa et al. (5,267,536).

Regarding claim 1: Imagawa discloses a rocker system for actuating valve lift events of an internal combustion engine (see figure 2), the rocker system comprising: a rocker arm (see numeral 143); an actuator link in constant driving engagement with the rocker arm and a camshaft (see numeral 141); a rocker shaft positioned in a cylinder

head and oriented to have a rotational axis substantially perpendicular to a rotational axis of the camshaft (see figures 2,3), wherein rocker arm is arranged to be rotated about the rocker shaft and engage a valve to actuate valve lift events of the internal combustion engine (see numeral 143).

Regarding claim 2: Imagawa discloses the actuator link comprises a push rod (see numeral 141).

Regarding claim 5: Imagawa discloses the rotational axis of the rocker shaft is oriented to be substantially parallel to a cylinder block deckface (see figure 2).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 3,4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Imagawa in view of Mills (4,913,104).

Imagawa discloses the claimed invention as recited above; however, fails to disclose the rocker arm drivingly engage more than one valve (intake valve).

Mills teaches rocker arm drivingly engage more than one valve (intake valve) (see column 1, lines 10 to 13). Mills further teaches that such arrangement saves space, which is often critical in an engine having cylinders of multiple valves (see column 1, lines 27 to 35).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the device of Imagawa by providing multiple valve engagements of a rocker arm as taught by Mills in order to save space as taught by Mills.

Allowable Subject Matter

6. Claims 6-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
